Luis Alfonso Berrio Narvaez

Software Developer | AI engineering

PROFESSIONAL PROFILE

Senior Software Developer and AI Engineer specializing in Java and Spring Boot, with over 5 years of experience in the design and development of web applications and large-scale enterprise solutions.

Comprehensive experience in full-stack environments, actively participating in database architecture and optimization, the development of key backend and frontend components, as well as the deployment and maintenance of distributed systems.

Focused on software quality, scalability, and maintainability, applying SOLID principles, design best practices, and unit and integration testing, using agile methodologies (Scrum/Kanban).

PROFESSIONAL EXPERIENCE

Software Engineer | Senior Java | Ago 2024 — Ene 2026
SwifTech Solutions S.A.S · Cali, Colombia

- I designed and developed new features and modules for the Factro project using Java and the Spring ecosystem (**Spring Boot**, Spring MVC, Spring Cloud, and Spring Data), and contributed to the evolution of the architecture and the **integration of services**.
- Design and development of **APIs** and **backend microservices** focused on enterprise systems integration. Implementation of complex business logic and management of the **orchestration** architecture to ensure seamless communication between internal components.
- Design and integration of reusable components in **Vue.js** and **Angular**, along with **JavaScript** and **TypeScript**, for **front-end development**, including the creation of tables and pages, **API integration**, and state management, among other key features.
- I implemented **authentication** and **authorization** mechanisms using **Spring Security, JWT, and OAuth 2,** incorporating **role-based access contro**l and A**PI protection.**
- Implementation of **asynchronous messaging solutions** using **Apache Kafka and RabbitMQ** for decoupled and distributed document processing. This enabled the bulk submission of electronic documents to the DIAN in a timely manner, significantly improving the **platform's efficiency and processing capacity.**
- Design and implementation of **CI/CD pipelines** using **Jenkins** to automate **deployments**, integrating static code analysis tools such as **SonarQube** to ensure high quality standards.
- I designed and optimized **SQL queries**, **views**, **triggers**, and **PL/SQL procedures** in **Oracle Database** to improve the performance and efficiency of business processes.
- I implemented continuous integration and code quality analysis processes using **GitLab** and **SonarQube**, automating compilation, analysis, and deployment tasks.
- Application containerization and deployment using **Docker** and **Docker Compose**, participating in their management and orchestration with **Kubernetes**. I supplemented the infrastructure on **AWS** by implementing services such as **Amazon S3, EC2 auto-scaling groups,** load balancers, and **VPC** design.

Software Engineer | Semi Senior | Ene 2024 — Jul 2024
SwifTech Solutions S.A.S · Cali, Colombia

- Development and implementation of new business rules for the Unificado project, using a reactive programming approach with **Spring WebFlux, Spring Boot**, Spring MVC, Spring Cloud, and Spring Data in **Java**. Participation in the design and evolution of **backend components**, ensuring **scalable**, **efficient**, and maintainable solutions.
- Handling and Resolving Nonconformities: Diagnosis and **Immediate Resolution of Technical Issues in the System**, Ensuring Its Operational Continuity, Stability, and Availability.

Software Engineer| Middle Developer | Feb 2021 — Dic 2023
Olsoftware · Cali, Colombia

- I participated in the migration and modernization of **SOAP** services to REST APIs, using **Java**, Spring Boot, Spring MVC, Spring Cloud, and Spring Data, for the Cali Chamber of Commerce.
- Business logic development and report generation: I **designed** and implemented new features for the Progresar project for the client Fanalca, including the creation and automation of advanced reports using **JasperReports** and **Jaspersoft** Studio.
- I designed and implemented the persistence layer using Hibernate/Jakarta on **PostgreSQL**, applying best development practices and separation of concerns.
- I developed integrations with **Oracle Web Services** for communication and information exchange between systems.
- I implemented and managed **Docker containers**, facilitating the configuration and deployment of services.

Personal Projects

- **Full-Stack** Financial Management Development: I designed and implemented a comprehensive system for managing payment orders, administering roles, and handling user logins. The **backend** was built using **Spring** (Java) and the frontend using **Angular**, **TypeScript**, and a reactive state architecture with **NgRx**, **OpenCode**, **SDD**, and **multi-agent systems**.
- Social Platform Development/Publishing Module: I designed and implemented a **full-stack web application** for publishing and interacting \ with content. I integrated the backend using **Spring Boot** and the frontend using **Angular**, including user authentication, image upload and management, a reaction system (likes), comments, and **real-time interactions.**
